Weekly Grain Comments
(Source: Profarmer)

To the point:

- This year's bumper grain crop on the east coast has seen GrainCorp announce that it plans to build an additional million tonnes of grain storage.
- Drought conditions throughout Canada have continued to impact crop development across the country. Crop conditions have all declined, with now only 20 per cent of all crops rated as good or excellent condition.

International and National

The USDA crop progress report ending 4 August has indicated that the US spring wheat harvest has continued to pick up pace following dry weather, with 17 per cent of the crop harvested so far. The condition of the US corn crop recorded a slight decline while the soybean crop condition improved by two percentage points.

Drought conditions throughout Canada have continued to impact crop development across the country. Crop conditions have all declined, with now only 20 per cent of all crops rated as good or excellent condition, a significant drop over last year's 77.5 per cent rating.

The International Grains Council (IGC) has reduced its worldwide grain production forecast for the 2021/22 season by 6 million mt due to the ongoing drought across the US and Canada. Despite these cuts, worldwide production still sits at record high levels.

Hot and dry conditions have impacted yields across Russia's major grain producing regions which has seen a reduction in forecast production figures, causing wheat prices to surge in the Black Sea region.

This year's bumper grain crop on the east coast has seen GrainCorp announce that it plans to build an additional million tonnes of grain storage and re-open several mothballed storage sites.

Wheat

QLD/Nth NSW

Old crop wheat prices have strengthened over the past week. While one might have thought that cleaning out on-farm storages might have bought some volume to market the rise in delivered bids for SFW would suggest otherwise. New crop wheat prices also firmed with values remaining a function of offshore markets and large local crop potential. Track markets are finding support from increased export potential and firming offshore values. Grower confidence continues to build as fertilizing programs ramp up across Border regions and South-West QLD. Warmer weather returned over the weekend, providing an opportunity for late winter planting.

Sth NSW/VIC/SA

Old and new crop wheat values have firmed this week as the strength in offshore futures markets is finally dragging up physical pricing. Australian grain in general remains competitive enough for new crop export business and Victorian values are in line with other states - all of this is pointing towards a strong export program which will continue to support values. There has been increased engagement from new crop sellers this week as prices have elevated and buyers have been a lot more proactive in seeking sellers as well.

Barley

Sth QLD/Nth NSW

Old crop barley prices were generally softer over the past week with liquidity drying up across both export markets in the south and domestic feed markets. Local buyers remain relatively comfortable with coverage levels as bids dry up across QLD and Northern NSW. New crop barley values remain relatively steady with markets awaiting the return of major importers to encourage price action. EU and Black Sea markets continue to provide price support for barley. Crop conditions continue to improve across QLD and Northern NSW with little forward volume traded given the relatively weak bids.

Sth NSW/VIC/SA

Old and new crop barley prices throughout Victoria and NSW were generally steady this week with barley markets lacking the short-term bullishness that wheat has enjoyed. South Australia on the other hand saw old crop barley firm. The expected increase in volume on the offer side hasn't played out yet for buyers but the firmness in wheat and other markets is helping to keep sellers' patient for now. The spread between wheat and barley for new and old crop has widened which will continue to see barley inclusion for domestic rations at high levels.

Sorghum

QLD

Old crop sorghum prices continue to track sideways with nearby demand supported by requirements from packers. Fine conditions in Southern QLD are expected to allow any late harvest to conclude in the coming weeks as grain continues to make its' way into the system. SOR2 has seen discounts generally in the range of $50-60/t with little consumer interest for lower grades from buyers. Export interest continues to support bids with nearby shipments increasing across QLD and Northern NSW port zones. New crop prices were mostly unchanged. There is some trade interest in owning new crop sorghum, although not enough currently to lift the bids closer to where grower sellers exist.
